The Security of People Should Be Considered First

Min Suk Chung

Department of Anatomy, Ajou University School of Medicine, Suwon, Korea

Windows should be closed when mosquitoes are swatted.

Likewise, visitors from the epidemic area (e.g., Wuhan, China) of novel corona virus (SARS-CoV-2) should have been locked down.

It does not matter whether the visitors are symptomatic or not.

Transmission even before symptoms is possible.

It is neither a violation of human rights, nor an irrational racism.

It is just for the health security of people as an emergency.

The effective preventive method, historically proven, should be followed.

At least, the failure must be learned as a lesson.
